

MACs for Climate Change Solution Comparison

1. A **Pressing** Concern

Credit: IPCC

- High temperatures only **getting higher**
- Warming **differences** of only **0.5 Celsius** is **important**

2. CO₂eq and MAC?

- **CO₂eq** measures **warming effect**
- **1 unit** of **CO₂eq** is the effect of **1 unit** of **CO₂**
- **MAC** is the cost to reduce emissions by a certain amount
- **CO₂eq** measures the emissions

3. Method

- Collects **minimum** and **maximum MAC** from climate change **solutions**
- **Secondary analysis** on data from **2018 or later**
- **Public** technologies
- Context of **Asian countries** (especially near **Indonesia**)

4. Results

Scan the QR code to **view** the **normalized** chart.
Hover/tap on a bar to see details.

- **Behavioral** changes are **cheapest** to do
- **Policies** have many **variations**
